

# Data basics

# Packages

# Using packages

```
install.packages("name")
```

Downloads files  
to your computer

Do this once per computer

```
library("name")
```

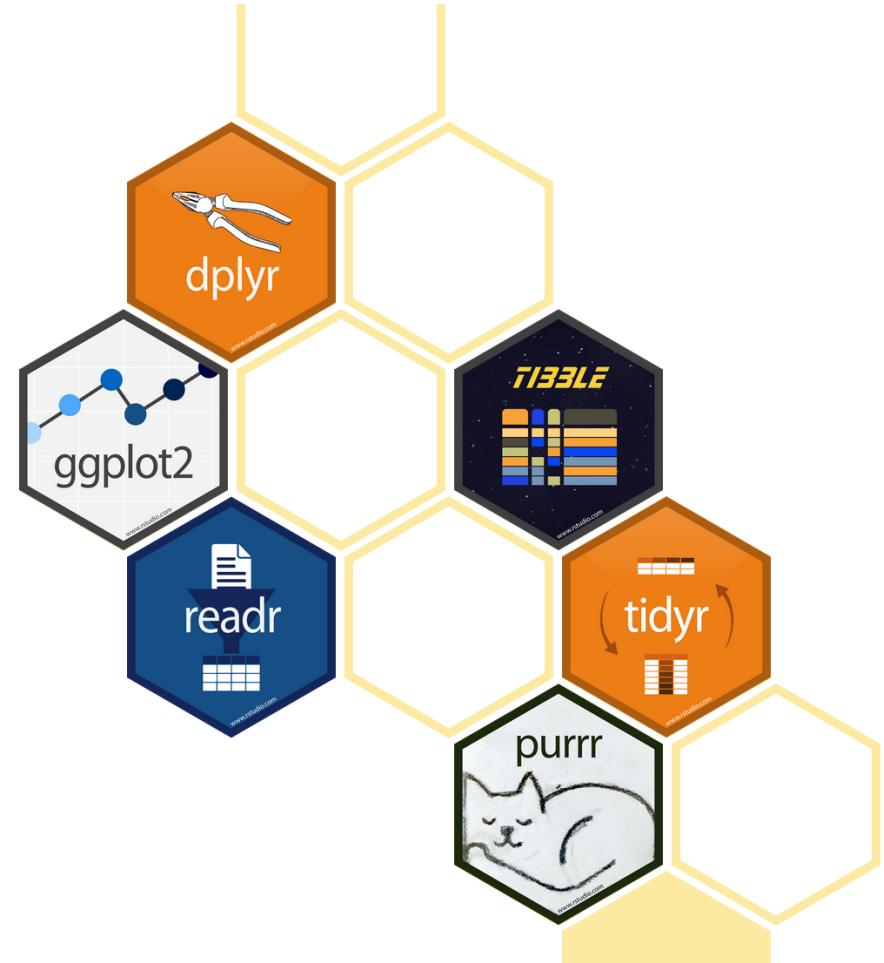

Loads the package

Do this once per R session

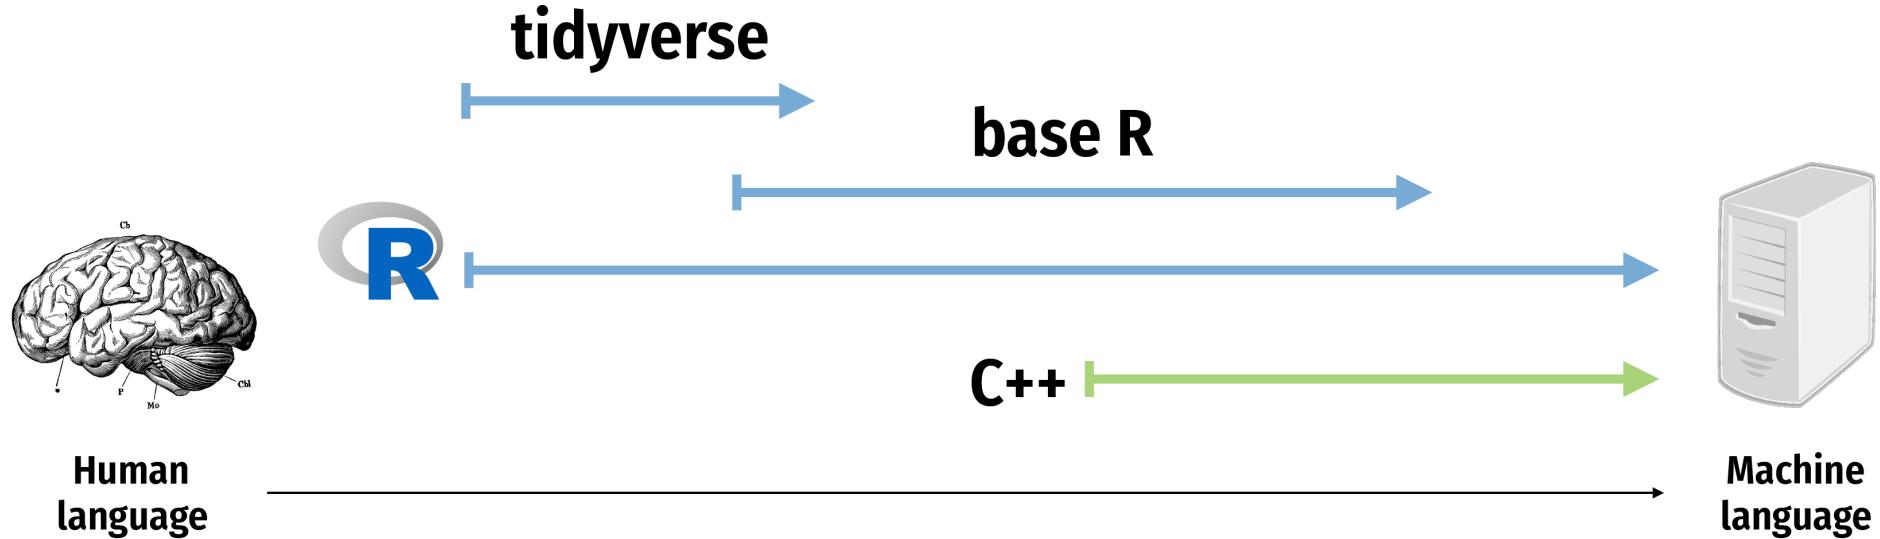

# The tidyverse

"The tidyverse is an opinionated collection of R packages designed for data science. All packages share an underlying design philosophy, grammar, and data structures."

... the tidyverse makes data science faster, easier and more fun...

# The tidyverse

# The tidyverse package

```
library(tidyverse)
```

The tidyverse package is a shortcut for installing and loading all the key tidyverse packages

```
install.packages("tidyverse")
```

```
install.packages("ggplot2")
install.packages("dplyr")
install.packages("tidyr")
install.packages("readr")
install.packages("purrr")
install.packages("tibble")
install.packages("stringr")
install.packages("forcats")
install.packages("lubridate")
install.packages("hms")
install.packages("DBI")
install.packages("haven")
install.packages("httr")
install.packages("jsonlite")
install.packages("readxl")
install.packages("rvest")
install.packages("xml2")
install.packages("modelr")
install.packages("broom")
```

```
library("tidyverse")
```

```
library("ggplot2")
library("dplyr")
library("tidyr")
library("readr")
library("purrr")
library("tibble")
library("stringr")
library("forcats")
```

# Rectangular data

# Data frames and tibbles

**Data frames are the most common kind of data objects; used for rectangular data (like spreadsheets)**

**Data frames: R's native data object**

**Tibbles (`tbl`): a fancier enhanced kind of data frame**

**(You really won't notice a difference today)**

# Vectors and lists

# Vectors

**Vectors are a list of values of the same type  
(all text, or all numbers, etc.)**

**Make them with `c()`:**

```
c(1, 4, 2, 5, 7)
```

**You'll usually want to assign them to something:**

```
neat_numbers <- c(1, 4, 2, 5, 7)
```

# Basic data types

---

<b>Integer</b>	Whole numbers	<code>c(1, 2, 3, 4)</code>
<b>Double</b>	Numbers	<code>c(1, 2.4, 3.14, 4)</code>
<b>Character</b>	Text	<code>c("1", "blue", "fun", "monster")</code>
<b>Logical</b>	True or false	<code>c(TRUE, FALSE, TRUE, FALSE)</code>
<b>Factor</b>	Category	<code>c("Strongly disagree", "Agree", "Neutral")</code>

---

# Importing data

# Packages for importing data

---

Work with plain text data

```
my_data <-  
read_csv("file.csv")
```

Work with Excel files

```
my_data <-  
read_excel("file.xlsx")
```

Work with Stata, SPSS, and  
SAS data

```
my_data <-  
read_stata("file.dta")
```

# Other types of data

---

<b>Package</b>	<b>Type of data</b>
jsonlite	JSON data
xml2	XML data
httr	Web APIs
rvest	Web pages (web scraping)
DBI	Databases (SQL)

---
